This document is hereby regraded to CONFIDENTIAL in accordance with the letter of 15 October 1978 from the Director of Central Intelligence to the Archivist of the United States.

Review

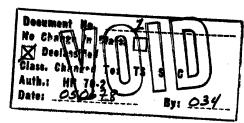

- 1. The about a 4-mile-square test ground was located in an uncultivated terrain with small ponds, in the vicinity of the Alt-Auz estate, slong the YELGAVA-LEPAYA road line, about 35 miles from YELGAVA.
- 2. Tests with rocket weapons (smoke-emitting and fireemitting projectiles) were small.
- 3. The following German experts, whose fields of work were not known, were employed there:

Friedrich ALLWEISER, BUSCHBECK,

> BURKHARDT. Rudolf MELLNER,

Georg PETTE,

Wilhelm ZEISS.

Field Comment:

The interrogated PW, who was assigned to operate agricultural machines and to drive horse-drawn vehicles in the test area, had knowledge of the testing done there. An intended second interrogation was unsuccessful.

From the small dimensions of the test ground it is inferred that tests with subcaliber rooket projectiles (chemical projectors) such as RS-82 or RS-132 missiles were made.

Of the mentioned German experts it is known that Professor BURKHARDT, former chief of the Soviet-directed Institute Berlin, and Eng BUSCHBECK, previously working on the Messina set with the Telefunken Firm, were deported to the USSR in 1946, BURKHARDT and BUSCHBECK are experts for the remote-control technique for rocket
